## **DETAILED ACTION**

### ***Withdrawal of Finality***

1. The Finality of the last Office Action is withdrawn in view of the newly discovered reference. Rejections based on the newly cited reference(s) follow.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Kuwayama et al. (US 2002/0034898).

Kuwayama et al. discloses a structure for mounting a terminal to a covered electric wire (Figs 16 and 17) comprising a terminal comprising a cylindrical wire end receiving portion and a cylindrical connecting portion for connecting to other equipment, and a covered electric wire from which a leading end of a covering is

removed to expose a leading end of an electric conductor, the wire end receiving portion receiving the leading end of the exposed electric conductor of the covered electric wire and a part of the covering, and the wire end receiving portion being uniformly compressed around substantially the entire periphery thereof to be in close contact with the exposed electric conductor. Kuwayama et al. also discloses an inner surface of the wire end receiving portion comprising a plurality of projections (re claim 2), an outer shape of the wire end receiving portion having a cylindrical shape, the wire end receiving portion being compressed around an outer portion and being extended in an axial direction due to plastic deformation (re claims 3 and 4). Claim 5 is method counterpart of claim 1. Kuwayama et al. also discloses the uniformly compressing being done by a swaging machine (re claim 6).
